DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Specification

2. The abstract of the disclosure is objected to because of the use of legal phraseology such as "moreover", "thereat", "thereby", and "thus". Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Ellestad (U.S Patent No. 2,214,763).

Regarding claims 1-3, Ellestad teaches (see Figures 2, and 6-8) a tape cutter and marker comprising a flexible marker (19) is attached to side edge of an adhesive tape reel (15) by means of a fixing member (17). The marker (19) is long enough to

Art Unit: 3724

enable encircling of any position around a largest periphery of the adhesive tape, and a cutting member (29) with a serrated edge (31) is configured on the marker.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ellestad in view of Long (U.S Patent No. 5,154,327).

Ellestad teaches all of the elements of the current invention as stated above except the marker being integrally molded to the reel.

Long teaches (Col. 4, lines 55-64) integrally molding a strap (19) and top to the base (19b) of a caulking tube cartridge so make sure the cap is not lost or misplaced.

It would have been obvious to have modified Ellestad to incorporate the teachings of Long to integrally mold the flexible marker to the reel of the tape so the marker could not be misplaced. Furthermore, when all of the essential elements of the claims except the integration of parts are found in the references. It has been held that the unity or diversity of parts would depend more on upon the choice of the manufacturer, and the convenience and availability of the machines and tools necessary to construct the part, than on any inventive concept *In Re Lockhart*, 90 USPQ 214. Therefore it would have been obvious to have modified Ellestad to make

the marker integrally molded with the reel if the manufacturer determined a need or had the necessary apparatuses to do so.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Samuelson (U.S Patent No. 4,627,560), and Marotz (U.S Patent No. 3,001,284) teach flexible tape dispensers and cutters.
